

Dynamic Dashboard - List of Infectious Agents with a relevant AMR issue

Section A: Categories applicable to all sectors

Bacteria / Gram staining / Genus or family name

The category includes any bacteria considered to have a drug resistance issue and are listed individually as priority bacteria for humans, animals and plants (see **section B - D**). Environment sector includes all bacteria and other pathogens with relevant drug resistance issue listed in all other sectors (**Tables 1 – 10**) following the approaches described under each section (**B – D**).

Bacteria / Not specified

Includes projects conducting R&D relevant to AMR that do not specify which bacterium or Gram reaction.

Bacteria / Other gram variable

This category includes the bacteria that are considered:

- Gram variable, meaning they may stain either negative or positive
- Atypical, meaning they do not colour with Gram staining but rather remain colourless, or it is difficult to see the Gram reaction
- Acid fast

Bacteria / Other gram negative

The category includes any gram negative bacteria considered to have a drug resistance issue that are listed as other bacteria or not listed individually (see **section B – D**). This will also include projects that are specifically conducting R&D on gram negative bacteria without specifying which bacterium.

Bacteria / Other gram positive

The category includes any gram positive bacteria considered to have a drug resistance issue that are not listed individually (see **section B – D**). This will also include projects that are specifically conducting R&D on gram positive bacteria without specifying which bacterium.

Section B: List of Infectious Agents relevant for AMR R&D in Humans

1. Bacterial Pathogens

Categorization and inclusion methodology for human bacterial pathogens

The World Health Organization's (WHO) Global Priority List of Antibiotic-Resistant Bacteria [1], the United States of America's Centers for Disease Control and Prevention (CDC) Antibiotic Resistant Threats in the United States 2019 [2], the bacteria included in the European Centre for Disease Prevention and Control's (ECDC) European Antimicrobial Resistance Surveillance Network (EARS-Net) [3] and the Indian Priority Pathogen List [4] jointly developed by the Department of Biotechnology (DBT), Government of India, and the WHO India Office, were used to develop a combined list of priority bacteria with a drug-resistance issue. It was considered that all research into these bacteria, irrespective of the drug-resistance profile, would be relevant to advance efforts to address antimicrobial resistance.

For the categorization process, only the bacterial genus level (noting the family *Enterobacteriaceae* was also included) was used and is displayed. **Table 1** lists the genus included in categorization and the rules applied for inclusion based on the aforementioned priority lists.

When projects included bacteria other than those listed in **Table 1** an individual assessment was performed by the Secretariat to determine if there is a known drug-resistance issue. This assessment included searching the literature and reaching a consensus within the Secretariat if the bacteria has a known drug-resistance issue or not. Where consensus was not reached or there was ambiguity in the literature bacteria were parked and further investigation was conducted.

The list of additional bacteria and the outcomes from the assessment are provided in **Table 2**, and are categorized as *Other bacteria* as per their Gram staining. Please note that these lists will be continually updated.

Table 1: Genus of priority bacteria and inclusion criteria for the Dynamic Dashboard

Priority [^]	Bacterial genus	Inclusion criteria for the Dynamic Dashboard
Critical	<i>Acinetobacter</i>	All <i>Acinetobacter</i> included.
	<i>Clostridioides</i>	<i>Clostridioides</i> (or <i>Clostridium</i>) <i>difficile</i> was included. Any other <i>Clostridioides</i> and <i>Clostridium</i> were individually assessed for inclusion.
	<i>Enterobacter</i>	All <i>Enterobacter</i> included.
	<i>Enterobacteriaceae</i>	<i>Enterobacter</i> spp., <i>Escherichia coli</i> , <i>Klebsiella pneumoniae</i> , <i>Proteus</i> spp. <i>Providencia</i> spp. and <i>Serratia</i> spp. were included. In addition, projects that just mentioned <i>Enterobacteriaceae</i> , without further specification, were included. Any other bacteria in the <i>Enterobacteriaceae</i> family were individually assessed for inclusion.
	<i>Escherichia</i>	<i>Escherichia coli</i> was included. Any other <i>Escherichia</i> were individually assessed for inclusion.
	<i>Klebsiella</i>	<i>Klebsiella pneumoniae</i> was included. Any other <i>Klebsiella</i> were individually assessed for inclusion.
	<i>Morganella</i>	All <i>Morganella</i> included.
	<i>Proteus</i>	All <i>Proteus</i> included.
	<i>Providencia</i>	All <i>Providencia</i> included.
	<i>Pseudomonas</i>	<i>Pseudomonas aeruginosa</i> was included. Any other <i>Pseudomonas</i> were individually assessed for inclusion.
High	<i>Serratia</i>	All <i>Serratia</i> included.
	<i>Campylobacter</i>	All <i>Campylobacter</i> included.
	<i>Enterococcus</i>	<i>Enterococcus faecium</i> and <i>Enterococcus faecalis</i> were included. Any other <i>Enterococcus</i> were individually assessed for inclusion.
	<i>Helicobacter</i>	<i>Helicobacter pylori</i> was included. Any other <i>Helicobacter</i> were individually assessed for inclusion.
	<i>Mycobacterium</i>	<i>Mycobacterium tuberculosis</i> was included. Any other <i>Mycobacterium</i> were individually assessed for inclusion.
	<i>Neisseria</i>	<i>Neisseria gonorrhoeae</i> and <i>Neisseria meningitis</i> was included. Any other <i>Neisseria</i> were individually assessed for inclusion.
	<i>Salmonella</i>	All <i>Salmonella</i> included.
Medium	<i>Staphylococcus</i>	<i>Staphylococcus aureus</i> was included. Any other <i>Staphylococcus</i> were individually assessed for inclusion.
	<i>Streptococcus</i>	<i>Streptococcus pneumoniae</i> , group A <i>Streptococcus</i> (<i>S. pyogenes</i>) and group B <i>Streptococcus</i> (<i>S. agalactiae</i>) were included. Any other <i>Streptococcus</i> were individually assessed for inclusion.
	<i>Haemophilus</i>	<i>Haemophilus influenzae</i> was included. Any other <i>Haemophilus</i> were individually assessed for inclusion.
	<i>Shigella</i>	All <i>Shigella</i> included.
Watch	<i>Bordetella</i>	<i>Bordetella pertussis</i> was included. All other <i>Bordetella</i> were checked to see if there was a published resistance issue

[^] Priority level used for visualisations on the Dynamic Dashboard

Table 2: Other bacteria with a drug resistance issue included in the Dynamic Dashboard

Genus	Species	Gram stain
<i>Actinomyces</i>	<i>Actinomyces</i> spp.	positive
<i>Burkholderia</i>	<i>B. cenocepacia</i>	negative
	<i>B. cepacia</i>	
	<i>B. mallei</i>	
	<i>B. multivorans</i>	
	<i>B. pseudomallei</i>	
	<i>B. vietnamiensis</i>	
<i>Chlamydia</i>	<i>C. trachomatis</i>	negative
<i>Clostridium</i>	<i>C. botulinum</i>	positive
	<i>C. perfringens</i>	
<i>Coxiella</i>	<i>C. burnetti</i>	negative
<i>Chronobacter</i>	<i>Chronobacter</i> spp., formerly <i>Enterobacter sakazakii</i>	negative
<i>Corynebacterium</i>	<i>C. diphtheriae</i>	positive
<i>Cutibacterium</i>	<i>C. acnes</i>	positive
<i>Enterococcus</i>	<i>E. hirae</i>	positive
<i>Helicobacter</i>	<i>H. cinaedi</i>	negative
<i>Listeria</i>	<i>L. monocytogenes</i>	positive
<i>Moraxella</i>	<i>M. catarrhalis</i>	negative
<i>Mycobacterium</i>	Non tuberculosis mycobacterium (NTM) as a group	variable
	<i>M. abscessus</i>	
	<i>M. africanum</i>	
	<i>M. avium</i>	
	<i>M. kyorinense</i>	
	<i>M. leprae</i>	
	<i>M. ulcerans</i>	
<i>Mycoplasma</i>	<i>M. genitalium</i>	variable
	<i>M. pneumoniae</i>	
<i>Porphyromonas</i>	<i>P. gingivalis</i>	negative
<i>Staphylococcus</i>	<i>S. epidermidis</i>	positive
<i>Streptococcus</i>	<i>S. mitis</i>	positive
<i>Treponema</i>	<i>T. pallidum</i>	negative
<i>Ureaplasma</i>	<i>Ureaplasma</i> spp.	variable
<i>Vibrio</i>	<i>V. alginolyticus</i>	negative
	<i>V. cholerae</i>	
	<i>V. vulnificus</i>	

2. Fungal pathogens

Categorization and inclusion methodology for human fungal pathogens

The human fungal pathogen list (**Table 3**) was developed in consultation with experts who contributed to the development of the World Health Organization's (WHO) Human Fungal Priority Pathogen list before its publication. The WHO report was published in 2022[5] , and current fungal pathogen list has been updated accordingly as part of the continual maturation of the Dynamic Dashboard.

For the categorization process, only pathogen genus or family were used and are displayed in the Dynamic Dashboard. All species within the listed genus or family were included and some representative species are listed in **Table 3**. When projects included species that are not listed in the table below and with a relevance for AMR, they were categorized as *Fungus–other*. All projects with relevant fungal pathogens without any specific details were categorized as *Fungus not specified*.

Table 3: Fungus with a drug resistance issue included in the Dynamic Dashboard

Fungus Genus	Species include, but not limited to
<i>Ascomycota Other</i>	AMR relevant species that belong to the <i>Ascomycota</i> phylum/division, not listed below
<i>Aspergillus</i>	<i>A. nidulans</i> ; <i>A. fumigatus</i> complex; <i>A. niger</i> complex; <i>A. flavus</i> complex; <i>A. ustus</i> complex; <i>A. terreus</i> complex
<i>Basidiomycota Other</i>	AMR relevant species that belong to the <i>Basidiomycota</i> phylum/division, not listed above
<i>Blastomyces</i>	AMR relevant species
<i>Candida</i>	<i>C. auris</i> ; <i>C. albicans</i> ; <i>C. glabrata</i> ; <i>C. tropicalis</i> ; <i>C. krusei</i>
<i>Cladophialophora</i>	AMR relevant species that belong to the <i>Cladophialophora</i> genus
<i>Coccidioides</i>	<i>C. posadasii</i> ; <i>C. immitis</i>
<i>Cryptococcus</i>	<i>C. gattii</i> ; <i>C. neoformans</i> (serotypes A, D & AD)
<i>Epidermophyton</i>	AMR relevant species that belongs to the <i>Epidermophyton</i> genus.
<i>Fonsecaea</i>	<i>F. pedrosoi</i>
<i>Fusarium</i>	<i>F. solani</i> ; <i>F. oxysporum</i> ; <i>F. subglutinans</i> ; <i>F. temperatum</i> ; <i>F. verticilloides</i> ; <i>F. falciforme</i> ; <i>F. solani</i> sensu lato; <i>F. keratoplasticum</i> ; <i>F. oxysporum</i> ; <i>F. sacchari</i> ; <i>F. petrophilum</i> ; <i>F. graminearum</i>
<i>Histoplasma</i>	<i>H. capsulatum</i>
<i>Lichtheimia</i>	AMR relevant species that belong to the <i>Lichtheimia</i> genus
<i>Lomentospora</i>	<i>L. profilicans</i>
<i>Microsporium</i>	AMR relevant species that belong to the <i>Microsporium</i> genus
<i>Mucor</i>	<i>M. circinelloides</i> ; <i>M. irregularis</i>
<i>Mucorales Other</i>	AMR relevant species that belong to the <i>Mucorales</i> order, not listed above
<i>Paracoccidioides</i>	AMR relevant species that belong to the <i>Paracoccidioides</i> spp.
<i>Phialophora</i>	<i>P. verrucosa</i>
<i>Pneumocystis</i>	<i>P. jirovecii</i> (previously known as <i>P. carinii</i>)
<i>Rhizopus</i>	AMR relevant species that belong to the <i>Rhizopus</i> genus
<i>Scedosporium</i>	AMR relevant species that belong to the <i>Scedosporium</i> spp.
<i>Sporothrix</i>	<i>S. schenckii</i> ; <i>S. brasiliensis</i>
<i>Talaromyces</i>	<i>T. marneffei</i>
<i>Trichophyton</i>	<i>T. Asahii</i> ; <i>T. rubrum</i> ; <i>T. mentagrophytes</i>
Not-specified	AMR relevant fungal pathogen, with no specific details given
Other	AMR-relevant fungal pathogen not covered by any of the categories listed above

Section C: List of Infectious Agents relevant for AMR R&D in Animals

Categorization and inclusion methodology for animal pathogens relevant to AMR

A pathogen list relevant to AMR R&D for animals was created based on WOA's guidance documents resulting from consultation of two ad hoc Groups on 'Prioritization of Disease for which Vaccines could reduce Antimicrobial Use in Animals'.

- Pigs, poultry and fish (April 2015) [AHG AMUR Vaccines 2015](#) [6] and
- Cattle, sheep and goats (May 2018) [AHG AMUR Vaccines Ruminants 2018](#) [7]

In addition, relevant animal pathogens with an unmet need for AMR were included per input from the experts consulted by the Secretariat for the development of the animal-specific categorization fields of the Dynamic Dashboard.

For the categorization process, only pathogen genus or family level were used and are displayed in the Dynamic Dashboard. All species within the listed genus or family were included and some representative species are listed in the tables. When projects included species that are not listed in the tables below and with a relevance for AMR, they were categorized as *Virus-other*, *Fungus-other* and *Parasite-other*, respectively. In the case of bacterial infections, they were categorized as other and according to gram staining (*Other gram positive*, *Other gram negative* and *Other gram variable*).

Table 4: Animal Bacterial Pathogens

Bacterial Genus	Species include, but not limited to
<i>Actinobacillus</i>	<i>Actinobacillus pleuropneumoniae</i>
<i>Aeromonas</i>	<i>Aeromonas hydrophila</i>
<i>Anaplasma</i>	<i>Anaplasma marginale</i>
<i>Bacillus</i>	<i>Bacillus anthracis</i>
<i>Bibersteinia</i>	<i>Bibersteinia trehalosi</i>
<i>Bordetella</i>	<i>Bordetella bronchiseptica</i>
<i>Brachyspira</i>	All <i>Brachyspira</i> included
<i>Brucella</i>	<i>Brucella suis</i> , <i>Brucella abortus</i> , <i>Brucella ovis</i> , <i>Brucella melitensis</i>
<i>Campylobacter</i>*	All <i>Campylobacter</i> included
<i>Chlamydiaceae</i>	All <i>Chlamydia</i> included
<i>Clostridium</i>	<i>Clostridium perfringens</i>
<i>Corynebacterium</i>	All <i>Corynebacterium</i> included
<i>Dermatophilus</i>	<i>Dermatophilus congolensis</i>
<i>Dichelobacter</i>	<i>Dichelobacter nodosus</i>
<i>Edwardsiella</i>	<i>Edwardsiella ictaluri</i>
<i>Ehrlichia</i>	<i>Ehrlichia ruminantium</i>
<i>Escherichia</i>*	All <i>Escherichia</i> included
<i>Flavobacterium</i>	<i>Flavobacterium columnare</i>
<i>Fusobacterium</i>	<i>Fusobacterium necrophorum</i>
<i>Haemophilus</i>	<i>Haemophilus parasuis</i>
<i>Histophilus</i>	<i>Histophilus somni</i>
<i>Lawsonia</i>	<i>Lawsonia intracellularis</i>
<i>Leptospira</i>	All <i>Leptospira</i> included
<i>Mannheimia</i>	<i>Mannheimia capricolum</i> , <i>Mannheimia haemolytica</i>
<i>Mycobacterium</i>	<i>Mycobacterium bovis</i> , <i>Mycobacterium avium</i> (paratuberculosis)
<i>Mycoplasma</i>	<i>Mycoplasma agalactiae</i> , <i>Mycoplasma hyopneumoniae</i>
<i>Pasteurella</i>	<i>Pasteurella multocida</i>
<i>Photobacterium</i>	All <i>Photobacterium</i> included

<i>Piscirickettsia</i>	<i>Piscirickettsia salmonis</i>
<i>Pseudomonas</i>*	All <i>Pseudomonas</i> included
<i>Salmonella</i>*	All <i>Salmonella</i> included
<i>Staphylococcus</i>*	<i>Staphylococcus aureus</i> , <i>Staphylococcus hyicus</i> , <i>Staphylococcus pseudintermedius</i>
<i>Streptococcus</i>	<i>Streptococcus agalactiae</i> , <i>Streptococcus suis</i> , <i>Streptococcus uberis</i>
<i>Trueperella</i>	<i>Trueperella pyogenes</i>
<i>Vibrio</i>	All <i>Vibrio</i> included
<i>Yersinia</i>	<i>Yersinia ruckeri</i>

*Any bacteria with relevance for AMR but not included in bacteria genus names highlighted in bold indicate a human priority pathogen as described above.

Commented [UL1]: Unclear
" not included in bacteria genus names.." ?

Table 5: Animal Viral Pathogens

Virus Family	
<i>Arteriviridae</i>	Porcine Reproductive and Respiratory Syndrome virus (PPRS)
<i>Birnaviridae</i>	Infectious Bursal Disease virus (IBDV)
<i>Coronaviridae</i>	Bovine coronavirus (BCoV), Avian coronavirus/Infectious bronchitis virus (IBV)
<i>Orthomyxoviridae</i>	All influenza viruses included
<i>Paramyxoviridae</i>	Peste des petits ruminants virus (PPRV), Bovine Respiratory Syncytial Virus (BRSV)
<i>Pestivirus</i>	Bovine Virus Diarrhoea Virus (BVDV)
<i>Poxviridae</i>	Goatpox Virus, Sheeppox Virus
<i>Reoviridae</i>	Bluetongue virus, Rotavirus

Table 6: Animal Fungal Pathogens

Fungus Genus	
<i>Aspergillus</i>	All <i>Aspergillus</i> included
<i>Candida</i>	All <i>Candida</i> included
<i>Cryptococcus</i>	All <i>Cryptococcus</i> included
<i>Mucorales</i>	All <i>Mucorales</i> included

Table 7: Animal Parasitic Pathogens

For the categorization process, parasites were grouped into protozoa, helminths and ectoparasites.

Parasites	
Protozoa- <i>Babesia</i>	All <i>Babesia</i> included
Protozoa- <i>Cryptosporidium</i>	<i>Cryptosporidium parvum</i>
Protozoa- <i>Eimeria</i>	All <i>Eimeria</i> included
Protozoa- <i>Theileria</i>	<i>Theileria annulata</i> , <i>Theileria parva</i>
Protozoa- <i>Trypanosoma</i>	All <i>Trypanosoma</i> included
Helminths-Nematodes	Mostly families: <i>Trichostrongylidae</i> , <i>Molineidae</i> , <i>Ancylostomatidae</i> , <i>Chabertiidae</i>
Helminths-Other	For example trematoda such as <i>Fasciola hepatica</i>
Ectoparasites	All ectoparasites are included

Section D: List of Infectious Agents relevant for AMR R&D in Plants

Categorization and inclusion methodology for plant pathogens relevant to AMR

A pathogen list relevant to AMR R&D for plants was created based on input from the experts consulted by the Secretariat for the development of the plant-specific categorization fields of the Dynamic Dashboard. Only bacterial and fungi-relevant plant pathogens were included. For fungal pathogens the Fungicide Resistance Action Committee (FRAC) pathogen list was considered [8]. Fungal pathogens listed by FRAC as having a high risk of development of resistance to fungicides were categorized by genus level (Table 9 below), while fungal pathogens listed by FRAC as having a medium risk of development of resistance to fungicides were categorized as one group termed *Fungus–Medium Priority* not by individual genus level (Table 10 below).

For the categorization process, only pathogen genus were used and are displayed in the Dynamic Dashboard. All species within the listed genus were included and some representative species are listed in the tables. When projects included species that are not listed in the tables below they were deemed not relevance for AMR. Plant projects addressed pathogens listed in the human and animal health sectors were included and categorized as described above.

Table 8: Plant Bacterial Pathogens

Bacterial Genus	Species include, but not limited to
<i>Acidovorax</i>	<i>Acidovorax avenae</i> spp.
<i>Burkholderia</i>	<i>Burkholderia glumae</i>
<i>Erwinia</i>	<i>Erwinia amylovora</i>
<i>Pseudomonas</i>	<i>Pseudomonas syringae</i>
<i>Ralstonia</i>	<i>Ralstonia solanacearum</i>
<i>Xanthomonas</i>	All <i>Xanthomonas</i> include
<i>Xylella</i>	<i>Xylella fastidiosa</i>

Table 9: Plant Fungal Pathogens – High risk categorized by genus level

Fungus Genus	Species include, but not limited to
<i>Alternaria</i>	<i>Alternaria alternata</i>
<i>Botrytis</i>	<i>Botrytis cinerea</i>
<i>Blumeria</i>	<i>Blumeria graminis</i>
<i>Cercospora</i>	<i>Cercospora beticola</i> , <i>Cercospora kikuchii</i> , <i>Cercospora sojina</i>
<i>Corynespora</i>	<i>Corynespora cassiicola</i>
<i>Dydimella</i>	<i>Dydimella bryoniae</i>
<i>Mycosphaerella</i>	<i>Mycosphaerella fijiensis</i> , <i>Mycosphaerella brassicicola</i> , <i>Mycosphaerella musicola</i> , <i>Mycosphaerella nawae</i> , <i>Mycosphaerella pinodes</i>
<i>Phakopsora</i>	<i>Phakopsora pachyrhizi</i>
<i>Plasmopara</i>	<i>Plasmopara viticola</i>
<i>Pseudoperonospora</i>	<i>Pseudoperonospora cubensis</i>
<i>Pseudocercospora</i>	<i>Pseudocercospora (Mycosphaerella) fijiensis</i>
<i>Pyricularia</i>	<i>Pyricularia oryzae</i>
<i>Ramularia</i>	<i>Ramularia collo-cygni</i>
<i>Sphaerotheca</i>	<i>Sphaerotheca fuliginea</i> , <i>Podosphaera xanthii</i>
<i>Venturia</i>	All <i>Venturia</i> included
<i>Zymoseptoria</i>	<i>Zymoseptoria tritici</i> ; Synonymous with <i>Septoria</i>

Table 10: Plant Fungal Pathogens – Medium risk categorized as one group and includes following genus level

Fungus Genus	Species include, but not limited to
<i>Albugo</i>	<i>Albugo candida</i>
<i>Alternaria</i>	<i>Alternaria brassicicola</i> , <i>A. brassicae</i> , <i>Alternaria solani</i>
<i>Ascochyta</i>	<i>Ascochyta pisi</i>
<i>Bipolaris</i>	<i>Bipolaris maydis</i>
<i>Blumeriella</i>	<i>Blumeriella jaapii</i>
<i>Bremia</i>	<i>Bremia lactucae</i>
<i>Colletotrichum</i>	<i>Colletotrichum acutatum</i> , <i>Colletotrichum gloeosporoides</i>
<i>Drepanopeziza</i>	<i>Drepanopeziza ribis</i>
<i>Elsinoe</i>	<i>Elsinoe</i> spp.
<i>Erysiphe</i>	<i>Erysiphe cruciferarum</i> , <i>Erysiphe heraclei</i> , <i>Erysiphe necator</i>
<i>Gibberella</i>	<i>Gibberella fujikuroi</i>
<i>Glomerella</i>	<i>Glomerella cingulata</i> (anamorph: <i>Gloeosporium fructigenum</i>)
<i>Neofabraea</i> (anamorph <i>Gloeosporium</i>)	<i>Neofabraea malicorticis</i> , <i>Neofabraea perennans</i> , <i>Neofabraea vagabunda</i>
<i>Leveillula</i>	<i>Leveillula taurica</i>
<i>Monographella</i>	<i>Monographella nivale</i>
<i>Monilinia</i>	<i>Monilinia</i> spp.
<i>Mycovellosiella</i>	<i>Mycovellosiella nattrassii</i>
<i>Oculimacula</i>	<i>Oculimacula</i> spp.
<i>Oidium</i>	<i>Oidium neolyopersici</i>
<i>Penicillium</i>	<i>Penicillium digitatum</i> , <i>Penicillium expansum</i>
<i>Peronospora</i>	<i>Peronospora</i> spp., <i>Peronospora manshurica</i>
<i>Pestalotiopsis</i>	<i>Pestalotiopsis longiseta</i>
<i>Phyllosticta</i>	<i>Phyllosticta citricarpa</i>
<i>Phytophthora</i>	<i>Phytophthora capsici</i> , <i>Phytophthora infestans</i> , <i>Phytophthora porri</i>
<i>Pseudoperonospora</i>	<i>Pseudoperonospora humuli</i>
<i>Pyrenopeziza</i>	<i>Pyrenopeziza brassicae</i> , <i>Pyrenophora teres</i> , <i>Pyrenophora tritici-repentis</i>
<i>Ramularia</i>	<i>Ramularia areola</i>
<i>Sclerotinia</i>	<i>Sclerotinia homoeocarpa</i>
<i>Septoria</i>	<i>Septoria glycines</i> , <i>Septoria lycopersici</i>
<i>Setosphaeria</i>	<i>Setosphaeria turcica</i>
<i>Sphaerotheca</i>	<i>Sphaerotheca macularis</i> , <i>Sphaerotheca mors-uvae</i>
<i>Spilocea</i>	<i>Spilocea oleagina</i>
<i>Stemphylium</i>	<i>Stemphylium vesicarium</i>
<i>Wilsonomyces</i>	<i>Wilsonomyces carpophilus</i> (<i>Ascospora beijerinckii</i>)

Section E: List of Infectious Agents relevant for AMR R&D in the Environment

Categorization and inclusion methodology for environment pathogens relevant to AMR

All pathogens listed in the **Tables 1-10** above were included. For the categorization process, only pathogen genus or family level were used and are displayed in the Dynamic Dashboard following the approaches described under the sectors human, animal and plant.
